Objective

I seek a user interface design position at a forward-thinking creative agency or tech company.

Talents

Specialized workflow allowing for quick iteration & prototyping.

Mastery of HTML, CSS, JS web technologies & design.

High level of proficiency in developing solid cross-browser, cross-device, responsive layouts.

Passionate about communicating with clients effectively to realize their goals in design.

Broad experience across the spectrum of design, from print to web.

Experience

Extreme Arts & Sciences

2014 - 2017

At Extreme Arts & Sciences (EAS), I am the primary interface designer and resident CSS expert. EAS immediately realized the value of bringing someone onto the team who has a deep understanding of code-based layout design. EAS is a fast-paced creative agency, constantly juggling multiple projects at once, all of them with tight deadlines. My approach to user interface design and iterative prototyping helps us meet these deadlines & produce solutions that our clients always walk away happy from.

DreamTime Studios

2012 - 2014

Dreamtime is a small creative agency based out of Spokane, Washington. I was the primary assistant to the business owner, taking his website design mockups and building them out in CSS, as well as designing the mobile and tablet versions of the websites. At Dreamtime I learned most of what I now know about responsive design as well as an introduction to working with CMS systems in the form of ExpressionEngine.

Signature Genomics

2010 - 2012

Signature Genomics is a genetics testing company specializing in microarray testing. At Signature I worked across print and interactive media. My duties included designing and branding new collateral, as well as updating the -markup and visual design of Signature Genomics' website and proprietary web application: Genoglyphix. I began as an intern and then was hired onto the team shortly afterwards.
